Energy and Carbon Policy

ISO Compliance Register Ltd is a specialist provider of compliance register software designed to support ISO Compliance Managers to achieve compliance to ISO Management Standards.

As a responsible business, we recognise that our activities will have an impact on the environment. The global climate is changing and as a business, we need to do our bit to manage our Carbon emissions and set stringent and far-reaching targets so that we 'do no harm'.

We recognise that to be a sustainable and successful business, we need to decouple our activities from Carbon as quickly as possible. To that end, we are committed to

- Become Carbon Neutral (Scope 1 and 2 emissions) by 2025
- Become Carbon Net Zero (Scopes 1, 2 and 3) by 2030

To achieve these aims, we are committed to fully understanding both our Energy Use and Carbon emissions. We will review our annual performance and commit, wherever possible using Best Available Techniques to continual improvement of our energy performance, our carbon emissions and our management systems that we utilise.

We are committed to satisfy applicable legal requirements and other requirements related to energy efficiency, energy use and energy consumption in all the geographies that we operate.

We will support all our procurement operations to understand the importance of seeking carbon friendly purchasing options. We will support projects that improve the design of our activities in order to reduce carbon emissions and improve energy performance improvement.

The Directors of the business have overall and final responsibility for ensuring that our policy on Social Values is embedded in our day-to-day policies and procedures. They will maintain day-to-day responsibility for ensuring this policy is put into practice.

This Policy is reviewed at regular intervals to ensure its continuing suitability.
