Information Security Policy

ISO Compliance Register Ltd is a specialist provider of compliance register software designed to support ISO Compliance Managers to achieve compliance to ISO Management Standards.

As such, we recognise that we have responsibilities for our own Information security and need to ensure that we do not put our customers at risk. To that end, we are committed to ensuring the Information Security of our software products, our own internal assets and security behaviours, and ensuring that we communicate fully with our customers.

We operate a management system to the requirements of ISO 27001:2022. This provides us with a framework for identifying and eliminating risks and maximising relevant opportunities to grow and develop. To achieve our commitment to continual improvement on Information Security, we improvement objectives and track and monitor our progress against them.

We are fully committed to identifying and fulfilling all applicable requirements, including legal and other compliance requirements, including those that are required by our customers and other interested parties. We will maintain appropriate communication with our customers in that regard.

The Directors of the business have overall and final responsibility for Information Security. They will maintain day-to-day responsibility for ensuring this policy is put into practice.

This Policy is reviewed at regular intervals to ensure its continuing suitability.
